

St John Fisher RC Primary School

Year Six Knowledge Organiser – Autumn One – Computing – Presentations

What we will be learning

Lessons 1 - 4

I know:

- How to use basic features of digital presentations.
- How to add and manipulate shapes and images.
- How to use effective text formatting to suit different purposes.
- How to create hyperlinks between slides.
- How to design a basic app prototype using Keynote.
- How to evaluate digital content and consider improvements.

Key Facts to Remember

- I understand the basic features and functions of digital presentation software.
- I can add and manipulate shapes and images effectively in a presentation.
- I can format text for clarity and impact, tailoring it to different purposes and audiences.
- I can create and use hyperlinks to navigate between slides or to external content.
- I can design a basic app prototype using Keynote, incorporating multimedia elements.
- I can evaluate digital content critically, identifying strengths and suggesting realistic improvements.

Key Vocabulary and Glossary

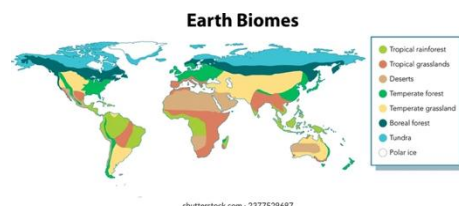

- **Digital Presentation** - A visual way of presenting information using software, often involving slides, text, images, and animations.
- **Shape** - A geometric figure such as a square, circle, or triangle that can be added to a digital presentation.
- **Image** - A picture or visual representation that can enhance a digital presentation.
- **Text Formatting** - The process of changing the appearance of text through font style, size, colour, and alignment.
- **Hyperlink** - A digital link that connects one slide to another, or to external websites, allowing easy navigation.
- **Prototype** - An early model of an app or software that demonstrates its design and functionality.
- **Keynote** - An application for making presentations on Apple devices, allowing design and content management.
- **Multimedia** - The integration of different types of content such as text, images, video, and audio in a presentation.
- **Audience** - The group of people who will view or listen to the digital presentation.
- **Evaluation** - The process of analysing and assessing the effectiveness of a piece of work to identify strengths and areas for improvement.

Interesting Facts

- The first digital presentation software was developed in the late 1980s and was called Harvard Graphics.
- Keynote is specifically designed to integrate seamlessly with other Apple products, making it a popular choice in schools and businesses.
- The average person remembers only 10% of what they hear but 65% of what they see. This is why using images and shapes in presentations is crucial.
- The concept of hyperlinks was created in the 1960s by Ted Nelson, paving the way for the internet as we know it today.

Theme

Apps & Software

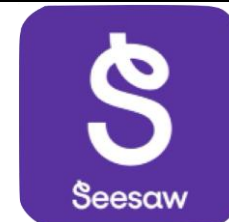

Different Biomes of the World

The major biomes of the world are aquatic, forest, grassland, desert, and tundra. What unique features do each biome have? What can live there? Where can they be found?

Keynote

Keynote is a free presentation tool that allows the user to combine text, images, video, sounds and animations.

Seesaw

An educational platform that can be used to create an electronic portfolio of children's completed digital work.
