Countries near the Equator are usually hot and get lots of sunlight. The Great Barrier Reef is a coral reef in the Pacific Ocean off the coast of Australia. Coral is a living animal that builds reefs and provides homes for many fish and sea animals. Oceans cover most of the Earth and are important for animals, plants, and humans. Global warming and rising sea temperatures are harming coral and other sea life. We can help protect the oceans and coral by saving energy, recycling, and looking after the environment.

Key Vocabulary

Australia	A large country and continent surrounded by oceans.	Global warming	When the Earth's temperature gets hotter, affecting animals, plants, and oceans.
Coral	A living animal that forms reefs in the ocean.	Ocean	A large body of salt water that covers much of the Earth.
Equator	An imaginary line around the middle of the Earth that makes nearby countries hot.	Reef	A structure in the sea made by coral and other animals, often home to fish.

Key Knowledge: Australia is surrounded by oceans, the Great Barrier Reef has living coral, hot countries are near the Equator, and we can help protect the environment
